Governor's condition was apparently yielding to treatment. Dr. Charles R. Robins and Dr. Manfred Call, who have been in consultation with him, agree that an operation is not necessary at this time, and express the hope that with continued treatment, the Governor may recover without recourse to surgery. He will not be moved from the Executive Mansion to a hospital, it was stated, unless some change in his condition necessitates a different method of treatment.

Other Fly Swatters to Get Busy Before Summer.

Busy Before Summer.

Compared with the results in July or August, spring fly-swatting is a hundred to one investment, according to the State Board of Health, which yesterday renewed its admonition for a general spring cleaning.

Millons of flies survived the winter, says the board, and these will begin to increase their families at amazing rates from this time until the end of September. As each female fly is the mother of at least 200 flies, all of which are fully grown in two weeks, the increase in the offspring of a single fly is in a geometric ratio sufficient to stagger a mathematician.

"A mild winter and many spring flies mean typhoid fever," reads the bulletin of the board "Last summer, with a favorable season and extensive precautions we were able to record the lowest typhold rate Virginia had known in years. But this standard cannot be again attained unless the people are willing to take the necessary precautions. A general clean-up of all premises is of prime importance, in that it will destroy the breeding places of the flies, and of equal importance is the proper care of all outhouses We can have this year as little or as much typhoid as we wish, and we can assure ourselves that this summer scourge can be greatly reduced by our careful and concerted efforts.
